

DSA Fast Track

Honest Guide — No Sugarcoat

Sabse Pehle Brutal Truth

DSA mein shortcut nahi hai, but **smart order** hoti hai. 3–4 months consistent effort = solid DSA.

Follow This Order (Don't Skip)

#	Topic	Why It Matters
1	Arrays & Strings	Sab kuch yahan se start hota hai
2	HashMap & HashSet	40% problems ka answer yahi hai
3	Two Pointers & Sliding Window	Array/String optimizations
4	Stack & Queue	Bracket, monotonic, BFS base
5	Binary Search	Sirf sorted array nahi, concept samjho
6	Recursion → Backtracking	Tree of decisions
7	Trees → BST → Graphs	Hierarchy aur connections
8	Dynamic Programming	Sabse last, tabhi touch karo

Rules Jo Actually Kaam Karte Hain

1. Pattern dekho, problem nahi

Har problem unique lagti hai but patterns ~15 hi hain. Ek pattern pakdo, 20 problems solve ho jaate hain.

2. Pehle brute force likho, optimize baad mein

Direct optimal solution dhundhna = time waste. Strategy: Brute → Better → Best.

3. 20-Minute Rule

20 min tak khud try karo. Nahi hua? Solution dekho, samjho, phir bina dekhe dobara likho. Yahi actual learning hai.

4. LeetCode pe Easy skip mat karo

Easy = pattern samjhne ka mauka. Log skip karte hain aur medium pe rote hain.

5. Ek topic pe 5–7 problems, move on

Over-practice ek topic pe = time waste. Revision round mein wapas aana.

6. Time & Space complexity hamesha likho

Coding ke baad yeh analyze karna habit banao. Interview mein yahi poochha jaata hai.

Resources (Minimum, Not Maximum)

- NeetCode 150 — best curated list, bas yahi karo
- Striver's A2Z Sheet — agar structured path chahiye

■ Dono mat karo. Ek choose karo.

Jo Log Karte Hain Aur Fail Hote Hain ■

- ✗ Tutorial hell — videos dekhte rehna bina code likhe
- ✗ Directly hard problems uthana
- ✗ Notes banana instead of coding
- ✗ 10 topics simultaneously chalana

Bottom Line: Roz 2–3 problems consistently > weekend pe 20 problems. Consistency beats intensity in DSA.
